# 1. SPECIFICATION

## 1-1. SYSTEM CONFIGURATION

|              |                                                                                                                    |
|--------------|--------------------------------------------------------------------------------------------------------------------|
| Display      | 4:3 panel, 1024 × 768 resolution, 1000 cd/m <sup>2</sup> typical brightness, ≥900:1 contrast ratio, LED backlight. |
| A/D Board    | HDMI input.                                                                                                        |
| Function Key | F1~F20 Function Key.                                                                                               |
| Touch Screen | No touch panel is integrated in this version.                                                                      |

## 2. TEST PLAN

### 2-1. THERMAL MEASUREMENT PROCESS

| Test Purpose           | <p>The purpose of conducting thermal profile testing is to identify potential thermal issues in the Equipment Under Test (EUT). Given that semiconductor failure rates increase significantly with rising junction temperatures, this testing contributes to the overall assessment of product reliability.</p> <p>As the system undergoes a cooling phase, operational modes may shift depending on stack configuration, temperature, and heat dissipation characteristics. Thermal mapping provides critical insight for optimizing thermal management strategies and determining the most effective component layout and monitoring arrangements.</p>                                                                                                                                                                                                                                                    |                |                  |                |     |     |   |     |     |   |      |      |   |      |      |   |      |      |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |   |

| Test Software          | N/A                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |                |                  |                |     |     |   |     |     |   |      |      |   |      |      |   |      |      |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |   |
| Test Procedure         | <p>1. Thermal Pre-Scan Measurement:<br/>Temperature Range: <b>-40°C to 60°C</b><br/>Humidity Condition: <b>60% RH</b> (when temperature exceeds 25°C)</p> <p>2. Actual Thermal Measurement Procedure:</p> <p>2.1. Identify the test points using the infrared thermal image and attach thermocouples to the identified hot spots.</p> <p>2.2. Place the Equipment Under Test (EUT) in the thermal chamber and configure the test temperature profile according to the specified requirements.</p> <p>2.3. After running the test continuously for 8 hours, record the peak temperature observed at each thermocouple measurement point.</p> <p>2.4. Power off both the thermal chamber and the EUT.</p> <p>2.5. Verify that the recorded temperature data for each component remains within its specified operating temperature range, as defined in the component specification or approval documents.</p> |                |                  |                |     |     |   |     |     |   |      |      |   |      |      |   |      |      |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |    |      |    |   |

## 2-2. TEST RESULT

### 2-2-1. Temperature Cycle

# Aging tests were performed on individual components across a range of temperature settings, under both maximum load and full load conditions, to evaluate thermal endurance and operational stability over time.

| Test Temperature | Test Result |
|------------------|-------------|
| -40°C            | PASS        |
| -20°C            | PASS        |
| 0°C              | PASS        |
| 25°C / 60%RH     | PASS        |
| 40°C / 60%RH     | PASS        |
| 50°C / 60%RH     | PASS        |
| 60°C / 60%RH     | PASS        |

#### 2-2-2. I/O Function

# Confirm that the system specifications and all input/output (I/O) interfaces are correctly configured and functioning as intended, in accordance with the defined technical standards.

| Item | Test Criteria                                                                  | Result |
|------|--------------------------------------------------------------------------------|--------|
| USB  | This component connects to the host and allows configuration of function keys. | PASS   |
| HDMI | HDMI input passed functional verification at 1024 × 768 resolution.            | PASS   |

### 2-2-3. Low-temperature & Boot-up

# Apply power to the system under a -40°C ambient condition and confirm successful system boot-up, ensuring stable initialization and operation at low temperatures.

| Ambient Temp. | Cold Boot Test Times | Test Result |
|---------------|----------------------|-------------|
| -40°C         | 10 times             | PASS        |

## 2-3. POWER CONSUMPTION

| Voltage | Current | Wattage |
|---------|---------|---------|
| 9.0V    | 1.55A   | 14W     |
| 12.0V   | 1.17A   | 14W     |
| 18.0V   | 0.78A   | 14W     |
| 24.0V   | 0.58A   | 14W     |
| 36.0V   | 0.39A   | 14W     |
